Empowered by Innovation

Behavior Detection Solution

NEC's highly efficient and user-friendly Behavior Detection Solution automatically detects suspicious behavior such as intrusion, loitering and object abandonment based on user-defined time and location parameters.

Auto behavior detection raises security while reducing staffing needs.

Automatic detection of suspicious behavior

- Increases the speed and accuracy of suspicious behavior detection.
- Improves surveillance while reducing staff and equipment costs.

User-friendly GUI

- Easy to define rules, scenarios and regions of interest.

Wide-ranging capabilities

- Detects intrusion, loitering, object abandonment, congestion, etc.
- Distinguishes between humans, shadows and moving objects (cars, trains, etc.).
- Provides the flexibility to define and combine time and location parameters.
